EDUCATION

- 2015 - 2019**
University of Sussex, Brighton, UK
Ph.D. in Informatics (Computer Science). Research title: "Efficient Data Transport in Data Centre Networks based on Fountain Codes". Supervisor: Dr George Parisis.
- 2012 - 2013**
University of Essex, Colchester, UK
MSc. Telecommunications and Information Systems - Graduated with distinction (A+, top of my class).
- 2005 - 2010**
Islamic University of Gaza, Palestine
BSc. Electrical Engineering\Communications and Control- Graduated with a GPA of 92.07% (highest award).

WORK EXPERIENCE

- 2018 - present**
Network Engineer - MAVIS Broadcast Ltd., Brighton, UK
My work focusses on the design and implementation of efficient Forward Error Correction mechanisms for video streaming between mobile devices and cloud infrastructure.
- 2019 - present**
Visiting Researcher - University of Sussex, UK
My research focusses on the development of network protocols for next-generation networks and study of Internet traffic.
- 2015 - present**
Associate Tutor - University of Sussex, UK
I have been an Associate Tutor at the School of Engineering and Informatics, running weekly lab sessions and seminars, marking students' projects and assignments for the following modules: Computer Networks, Operating Systems, C/C++ Programming and Global Design Challenge.
- 2013 - 2014**
Lecturer - University College of Science and Technology, Gaza, Palestine
I taught the following modules: Sensors, Digital Integrated Circuits and supervising final-year projects.
- 2010 - 2012**
Teaching Assistant - Islamic University of Gaza, Palestine
I was a teaching assistant for the following modules: Digital Signal Processing, Digital Communications, Image Processing, Electromagnetism and Probability Theory&Statistics.

RESEARCH INTERESTS

- My research interests lie at the intersection of networked systems and protocols, information theory and statistical modelling.
- During my PhD studies, I have developed SCDP, an efficient data transport protocol for data

centres. SCDP builds on RaptorQ coding and is tailored for one-to-many and many-to-one data transfer patterns, which are extremely common in modern data centres. SCDP does so without compromising on efficiency for short and long unicast flows. SCDP achieves this by integrating RaptorQ codes with receiver-driven data transport, in-network packet trimming and Multi-Level Feedback Queuing (MLFQ); (1) RaptorQ codes enable efficient one-to-many and many-to-one data transport; (2) on top of RaptorQ codes, receiver-driven flow control, in combination with in-network packet trimming, enable efficient usage of network resources as well as multi-path transport and packet spraying for all transport modes. Incast and Outcast are eliminated; (3) the systematic nature of RaptorQ codes, in combination with MLFQ, enable fast, decoding-free completion of short flows. The work is in collaboration with Prof Crowcroft (University of Cambridge) and has appeared as a poster in ACM SIGCOMM 2018 and is currently under revision for IEEE/ACM Transactions on Networking.

- In collaboration with Dr Clegg (QMUL), we have conducted one of the most comprehensive studies on Internet traffic in the literature and is unique with respect to the spatial and temporal diversity of the studied Internet traces. Through rigorous statistical analysis of publicly available traces, we showed that the log-normal distribution is the best fit for Internet traffic volume. The work has major impact on designing models for researching networking problems, SLA provisioning and 95th-percentile pricing for ISPs. The work was published (reviewed in top 5% amongst 1464 papers) at the flagship IEEE networks conference with a follow-up submission in IEEE/ACM Transactions on Networking.
- I work as a network engineer at MAVIS Broadcast Ltd in a project that aims at changing the way broadcasters and rights holders make live content. From capture to production we are re-imagining the live workflow with a cloud-based production model. Our on-demand platform provides a complete production toolset for professional simultaneous live broadcasts. MAVIS is creating products that allow customers to optimise their business, giving them new opportunities to produce engaging live content that looks and sounds great. As part of my work with Mavis, I am researching reliable video streaming protocols that are crucial for broadcasters who are challenged with the data transport often not being efficient for high-end broadcast applications.

RESEARCH ACTIVITIES

- Reviewer for IEEE INFOCOM 2019 and 2020.
- Presentation of my PhD research at the Next Generation Networking and Multi-Service Networks workshop, 2018 and 2019.
- Presentation of simulation model paper at OMNeT++ Summit, 2019.
- Presentation of research paper at IEEE INFOCOM, 2019.
- Presentation of poster at ACM SIGCOMM, 2018.
- Presentation of a Research Buddy Scheme at the SAGE Research Hive, University of Sussex, 2018.
- Shadow Program Committee for ACM Internet Measurement Conference (IMC), 2018.
- Finalist (5 out of 47 participants), Student Research Competition (SRC) held at SIGCOMM, 2018.
- Participation in the organisation of the 16th Mathematics of Networks workshop at the University of Sussex, 2017.

HONORS AWARDS

- Best In-session Presentation Award, IEEE INFOCOM, 2019.
- First prize in the Maths Challenge - organised by 'rep2rep' research group at Sussex and Cambridge universities, 2019.

- Travel grant from IEEE INFOCOM to attend the conference, 2019.
- Travel grants from ACM SIGCOMM to attend the conference, 2016 and 2018.
- Best PGR project poster, School of Engineering and Informatics, University of Sussex, 2017.
- Associate Fellowship of the Higher Education Academy in the UK, 2016.
- Full PhD Scholarship, School of Engineering and Informatics, University of Sussex, 2016.
- Turkish Ministry of Education fund for an exchange program at Anadolu University, 2014.
- Telecom Prize for best performance in my master's course, University of Essex, 2013.
- HESPAL scholarship from the British Council in Palestine to study for an MSc degree in Telecommunications and Information Systems at the University of Essex, UK, 2012.
- Excellence Scholarship, awarded to highest performing students, IUG, Palestine, 2005-2010.

SKILLS

Languages

- Arabic (native)
- Turkish (very good)
- English (excellent)
- Dutch (beginner)

Software

- OMNeT++
- LaTeX
- Protus
- OrCAD
- Git
- Video Editing
- Wireshark
- NS-3
- LabVIEW
- Arduino
- Photoshop
- Microsoft Office
- Linux command-line

Programming languages

- C/C++
- Swift
- Java
- MATLAB/Python

ACADEMIC REFEREES

- Dr George Parisi, Senior Lecturer at Informatics Department, University of Sussex, UK.
- Prof Ian Wakeman, Head of the Department of Informatics, University of Sussex, UK.
- Dr Nikolay Zakhleniuk, Computer Science Department, University of Essex, UK.
- Prof David Crawford, Computer Science Department, University of Essex, UK. [Reference Letter](#)
- Dr Martin Fleury, Computer Science Department, University of Essex, UK. [Reference Letter](#)
